the strong productivity growth of the us and scandinavian countries in europe in the 1990s has raised the question whether the ict sector information and communication technology that is computers plus telecommunications plus digital services is the new driving engine of high growth in leading oecd countries judging by the empirical evidence for the us including a new study by mckinsey which gives mixed evidence it is still too early to clearly dismiss robert g gordon's hypothesis that the acceleration of us output growth is due to quality problems of price measurement exclusively due to cyclical factors and increased productivity growth in the computer sector the counter hypothesis is associated with research by stiroh and others who argue that there are positive productivity spillover effects from ict to other sectors indeed it is not clear ex ante whether mainly the old economy or the so called new economy stands to benefit most from high innovation rates and strong productivity shifts associated with the spreading of digital services interestingly the increased economic role of the internet also contributes to the internationalization of the economy since more services have become tradable and growing import competition itself could stimulate productivity growth and thus contribute to higher growth if ict plays a key role in the new economy there are important implications in the differential degree to which germany and the us have implemented ict

the rise of large powerful states in europe after 1000 a d transformed life across the continent and eventually through the whole world the new european states disposed of unprecedented stores of capital and vast military capacities in recent decades scholars have often drawn general models of state formation from the european experience after 1700 then applied them with only partial success to other parts of the world although such studies of modern europe improved on early theories of modernization and development they failed to accommodate the varied ways in which city states empires federations centralized states and other forms of government evolved and the pivotal role that cities played in the multiple paths to state formation in a sweeping original work detailing eight centuries of city state relations charles tilly wim p blockmans and their contributors document differences in political trajectories from one part of europe to another and provide authoritative surveys of urbanization in nine major regions they also suggest many correctives to previous analyses of state formation they show that the variable distribution of cities significantly and independently constrained state formation and that states grew differently according to the character of urban networks in a given region their systematic study shows that unilinear models of state transformation underestimate the contingency and variability of popular and elite compliance with state building activities the book s findings offer important implications for the nature of economy sovereignty warfare state power and social change throughout the world
