most recent work on the nature of experiment in physics has focused on big science the large scale research addressed in andrew pickering s constructing quarks and peter galison s how experiments end this book examines small scale experiment in physics in particular the relation between theory and practice the contributors focus on interactions among the people materials and ideas involved in experiments factors that have been relatively neglected in science studies the first half of the book is primarily philosophical with contributions from andrew pickering peter galison hans radder brian baigrie and yves gingras among the issues they address are the resources deployed by theoreticians and experimenters the boundaries that constrain theory and practice the limits of objectivity the reproducibility of results and the intentions of researchers the second half is devoted to historical case studies in the practice of physics from the early nineteenth to the early twentieth century these chapters address failed as well as successful experimental work ranging from victorian astronomy through hertz s investigation of cathode rays to trouton s attempt to harness the ether contributors to this section are jed z buchwald giora hon margaret morrison simon schaffer and andrew warwick with a lucid introduction by ian hacking and original articles by noted scholars in the history and philosophy of science this book is poised to become a significant source on the nature of small scale experiment in physics

this volume of new essays written by leading philosophers of science explores a broadly methodological question what role should metaphysics play in our philosophizing about science the essays address this question both through ground level investigations of particular issues in the metaphysics of science and by more general methodological investigations

scientific thinking must be understood as an activity the acts of interpretation representation and explanation are the cognitive processes by which scientific thinking leads to understanding the book explores the nature of these processes and describes how scientific thinking can only be grasped from a pragmatic perspective

beginning from an outline of classical views in philosophy of science this text attempts to understand the notions of scientific progress scientific objectivity and the growth of knowledge

since jan 1901 the official proceedings and most of the papers of the american association for the advancement of science have been included in science

**Historical And C**  
an exploration of the scientific mindset such character virtues as curiosity veracity  
attentiveness and humility to evidence and its importance for science democracy  
and human flourishing exemplary scientists have a characteristic way of viewing  
the world and their work their mindset and methods all aim at discovering truths  
about nature in an instinct for truth robert pennock explores this scientific mindset  
and argues that what charles darwin called an instinct for truth knowledge and  
discovery has a tacit moral structure that it is important not only for scientific  
excellence and integrity but also for democracy and human flourishing in an era of  
post truth the scientific drive to discover empirical truths has a special value  
taking a virtue theoretic perspective pennock explores curiosity veracity  
skepticism humility to evidence and other scientific virtues and vices he explains  
that curiosity is the most distinctive element of the scientific character by which  
other norms are shaped discusses the passionate nature of scientific  
attentiveness and calls for science education not only to teach scientific findings  
and methods but also to nurture the scientific mindset and its core values drawing  
on historical sources as well as a sociological study of more than a thousand  
scientists pennock s philosophical account is grounded in values that scientists  
themselves recognize they should aspire to pennock argues that epistemic and  
ethical values are normatively interconnected and that for science and society to  
flourish we need not just a philosophy of science but a philosophy of the scientist

broad ranging anthology that presents the best classical and contemporary  
material within the context of current trends in the philosophy of science can be  
used as a core text or a supplemental reader

originally published englewood cliffs n j prentice hall c1992

of all the topics in the history of philosophy the history of different forms of  
thinking and contemplation is one of the most important and yet is also relatively  
overlooked what is it to think philosophically how did different forms of thinking  
reflection contemplation critique and analysis emerge in different epochs this  
collection offers a rich and diverse philosophical exploration of the history of  
contemplation from the classical period to the twenty first century it covers  
canonical figures including plato aristotle descartes and kant as well as debates in  
less well known areas such as classical indian and islamic thought and the role of  
speculation in twentieth century russian philosophy comprising twenty two  
chapters by an international team of contributors the volume is divided into five  
parts flourishing and thinking from homer to hume the thinking of thinking from  
augustine to gödel images and thinking from plotinus to unger bodies of thought  
and habits of thinking from plato to irigaray the efficacy of thinking from sextus to  
bataille thought a philosophical history is the first comprehensive investigation of  
the history of philosophical thought and contemplation as such it is a landmark
